

# Digital communication tool for titrating antidepressants

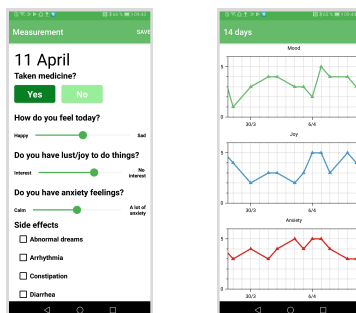

# New ways of working for a safe and sound treatment of depression

**Seno** is a digital communication tool that, together with new working methods, provides a safe and sound titration of SSRI drugs. The patient can, together with relatives and care givers, in completely new ways discuss how the patient feels and the effect of the medicine. Consensus on treatment increases. The family becomes more involved and can more easily follow the patient's mood.

**Seno** offers the following benefits:

- Patients and families feel more **confident**
- Increased **safety** if impaired health
- Involved patients
- **Treat more patients** with same resources
- Simplified **communication**

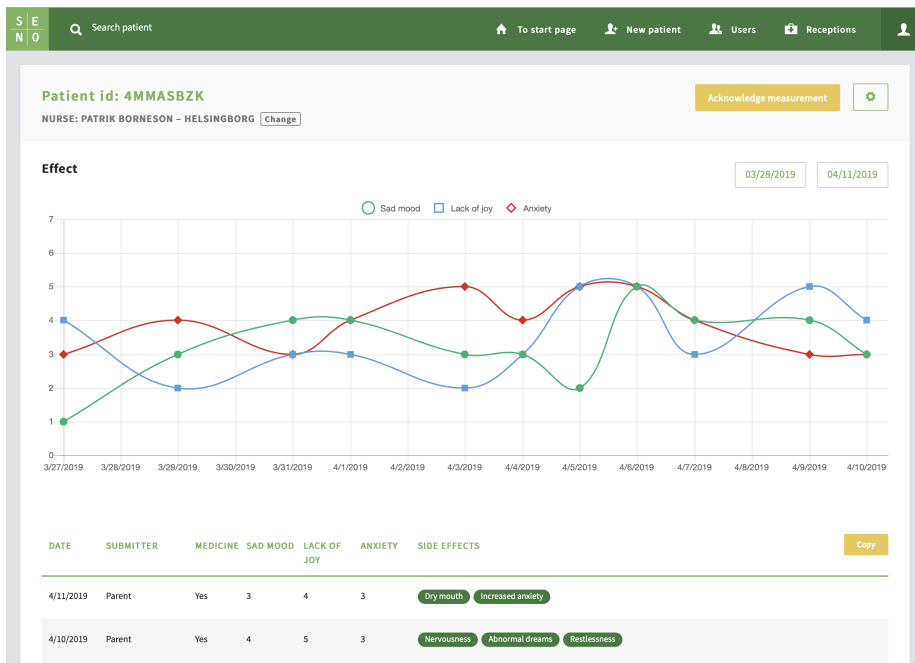

Both patients and relatives can use the **Seno App** to register if the patient has taken their medicine, mood, joy/desire for activity, feelings of anxiety and any side effects. With specific intervals, self-assessment forms can also be filled in and submitted.

**Seno** makes the patients feel safer and more involved in their medication, as there is someone who clearly follows up the treatment at the clinic.

**Seno App** is available in Swedish and English and can be downloaded free of charge via the Apple App Store or Google Play.

# Clear and simple look for quick and accurate analyzes

Doctors and nurses use **Seno Web** to analyze and follow up the data that patients submit via **Seno App**. The submitted data are displayed in **clear graphs** and tables. The simple user interface makes it fast and easy to draw medical conclusions and discover impaired health. Through the built-in message function, the staff can **easily communicate** with the patients, if necessary, to adjust the medication and confirm for the patients that submitted data have been analyzed.
